Summary

Full Stack Engineer with around 3 years of experience building and shipping web applications using React, Next.js, Node.js, Express.js, PostgreSQL, and MongoDB. Strong in the integration layer of frontend development – architecting state management (Zustand, React Query), wiring APIs into functional React components, and building the data flow logic that connects UI to backend services. Experienced in Generative AI integrations, RAG-based systems, payment platforms, authentication workflows, and cloud deployments on AWS. Comfortable working across the stack with a focus on clean, maintainable, production-ready code.

Work Experience

Full-Stack Developer

Jun 2025 – May 2026

Bylidd (New York, US — Remote)

- Built the API integration layer for React/Next.js applications using React Query – setting up data fetching, caching, synchronisation, and error handling patterns that the broader UI team consumed.
- Implemented functional React logic across components: custom hooks, state management, form handling, and async workflows connecting frontend behaviour to backend APIs.
- Designed and implemented a RAG-based customer support service end to end – document chunking, embedding generation, vector search, and LLM-powered response generation – deployed as a production-ready backend service.
- Built Generative AI workflows (OpenAI) to automate structured data extraction from intake forms and enrich HelpScout support tickets, integrating cleanly with existing backend systems.

Software Engineer

Feb 2023 – Dec 2024

MicroTechnologies (Bhopal, M.P)

- Developed full-stack web applications across both frontend (React components, state management, API integration) and backend (Node.js, Express, PostgreSQL) for production environments.
- Built reusable React components and managed client-side data flows, while also designing the RESTful APIs and database schemas those components depended on.
- Optimised database queries through indexing and schema improvements, and implemented secure authentication workflows (JWT, OTP) across the full stack.
- Collaborated in agile sprints, participated in code reviews, and delivered stable production releases on schedule.

Projects

Aether XYZ Terminal – Financial Analytics Platform

- A web-based financial analytics platform for stock and crypto investors, featuring real-time market data, portfolio tracking, AI-assisted research, and multi-role dashboards.
- Personally architected the frontend data layer – React Query setup, Zustand store structure, and custom hooks – enabling the rest of the team to build UI reliably on top of a consistent data foundation.
- Owned and delivered end to end: admin dashboard, Intercom ticketing integration, watchlist module (CRUD and sharing), and real-time technical indicator computation.
- Integrated Stripe subscriptions, live market data APIs, and PostHog analytics, handling async state, edge cases, and production reliability across the platform.
- **Technologies:** Next.js, TypeScript, React Query, Zustand, Express.js, Stripe, Intercom, Posthog, AWS, MongoDB

Gild – Group Payments Platform

- Built a group gifting and payments platform end to end – event management, contribution tracking, payment flows, and host payouts – architecting both the React state layer and the supporting backend APIs.
- Set up Zustand stores and React Query data flows for multi-role dashboards, alongside Stripe payment workflows, Google/OTP authentication, and AWS SES for transactional emails.
- Designed backend data models and REST APIs for event scheduling, contribution lifecycle, and payout management, owning the full stack from database to UI logic.
- **Technologies:** Next.js, TypeScript, React Query, Zustand, Zod, Express.js, MongoDB, AWS SES, Stripe, Postman

Skills

Languages: JavaScript (ES6+), TypeScript, HTML5, CSS3, SQL

Frontend Integration: React.js, Next.js, React Query (data fetching, caching, sync), Redux, Zustand (state architecture), Custom Hooks, Zod, Tailwind CSS, MUI

Back-End & APIs: Node.js, Express.js, RESTful API Design, Data Modelling, Mongoose, Sequelize, SendGrid

Auth & Payments: JWT, OTP, Google OAuth, Stripe (Subscriptions, Payouts, Webhooks), AWS SES

Database: MySQL, PostgreSQL, MongoDB

AI & Generative AI: OpenAI API, RAG, Vector Search, Embeddings, Prompt Engineering, LLM Integration

Cloud & DevOps: AWS (EC2, S3, SES, Auto Scaling, IAM, CloudWatch), Microsoft Azure, GitHub Actions, CI/CD, Docker

Tools & Practices: Git, GitHub, GitLab, Postman, Agile/Scrum, Code Reviews

Education

Sagar Institute of Science & Technology

2020 – 2024

Bachelor of Technology in Computer Science and Engineering

CGPA: 7.12

Christ Memorial School

2019 – 2020

AISSCE (PCM)

77%

Christ Memorial School

2017 – 2018

SSC

77.7%

Achievements & Certifications

- Principles of UI/UX Design
- Namaste React – Akshay Saini
